THE AURUM CENTURY CLUB

presents

The *Kilo.*

Physical gold as the foundation. Private capital as the return.

A Singapore program for a founding group of qualified investors.

What is *inside*.

The program at a glance — followed by how it works, why Korean capital needs this structure, and how new deals reach you.

I

The *Origin.*

*What was missing.
The fund we built.*

ORIGIN

The deals were there. We built the mechanism.

The principals have backgrounds in *US private market investing* and *Korean cross-border capital placement*. *The capital was ready. The deals were available.* What was missing was the mechanism to hold them.

FRICTION

Demand *outgrew the structures* built to serve it.

Korean appetite for offshore private positions rose faster than the channels designed to receive it. Each direct deal triggered another FETA filing, another KoFIU review, another year-end line on the member's overseas account return. *The friction compounded with every deal.*

ACCESS

Institutional access *did not arrive* by accident.

The general partners that clear the kind of deal worth doing — the closed primaries, the curated secondaries, the disciplined credit books — work through long relationships, not broker channels. *The right counterparties were not advertising.*

THE GAP · DIRECT ROUTE

Two decades of capital arriving — at a structure that could not receive it.

Au Aurum is the fund built to hold them.

Three forces. *One fund.*

The decision was not what to build. The decision was where. Three answers came into alignment at one place — Singapore. Each has been understood, on its own, for decades. *The combination is what is new.*

Access

The deals that do not advertise.

Pre-IPO secondaries and disciplined US private credit clear through GP relationships, not brokered channels. The partners behind Aurum have built those relationships across two decades of US private market activity. *Members inherit the relationship — not the brokerage.*

SOURCED · GP-DIRECT · CURATED

Singapore

Capital grows where it sits.

Singapore's Variable Capital Company holds offshore investments outside the Korean repatriation cycle. Income and gains accumulate at the fund level — *the growth stays where it is, compounding, not recurring.* expected Singapore VCC

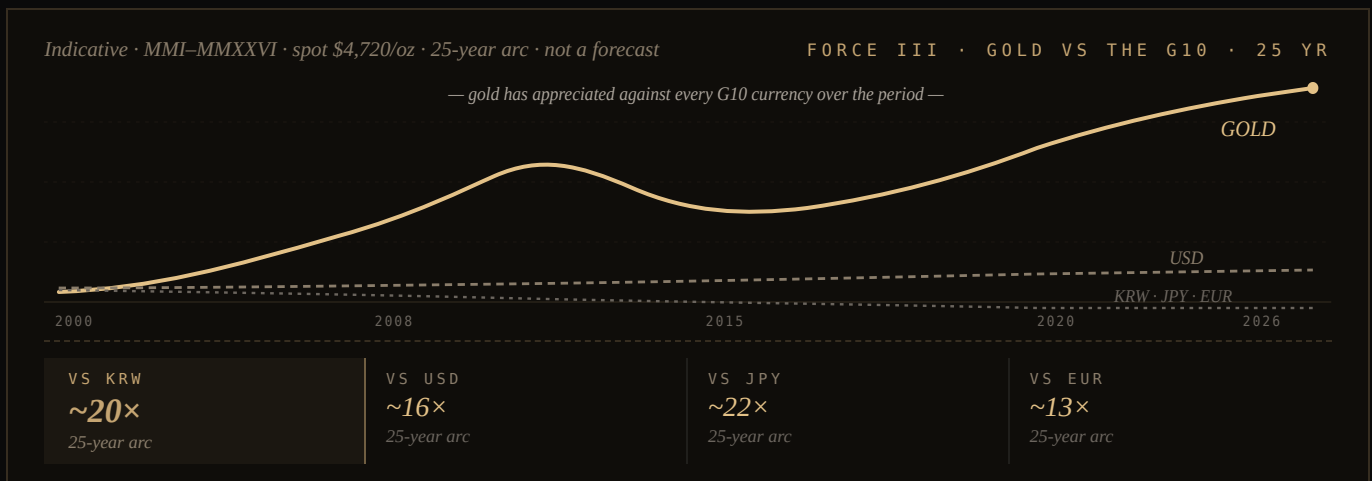

Gold

Not the gift. The asset.

In Korea, gold is the wedding token, the quiet inheritance — *bought domestically at a premium few realize.* Across a generation, the asset has appreciated against every G10 currency. *Singapore is the world's deepest bullion market — where the bar also collateralizes credit.*

LBMA · ALLOCATED · SG HUB

SAFETY *Where these three meet — The Kilo.* YIELD

Access opens. Singapore holds. Gold protects.

II

The program, *in one page.*

What it is, what it costs, what a member receives.

One kilogram. *The Founding 100.*

Physical gold is the qualifier. Private capital access is the product. What follows is what each *member* will receive at launch.

WHAT YOU HOLD

What *you hold.*

A member holds LBMA-grade physical gold in allocated custody at Singapore Freeport custodian. The bars are in the member's name, by serial number, London-market insured.

The gold also serves as collateral for a credit line at a Singapore institutional bank — *up to 75% LTV at Aurum's discretion, sized to member commitment level.* The metal never moves; the credit it unlocks deploys into Aurum Funds.

WHAT AURUM DOES WITH IT

What *Aurum does with it.*

Aurum Funds deploys the credit into *two sleeves*: pre-IPO growth equity (Series D+ AI, robotics, critical infrastructure) and US mid-market private credit (10–14% gross, with equity participation where structure allows). *Reinvestment is the default path* — fund-level returns compound across vintages.

WHAT YOU RECEIVE

What *you receive.*

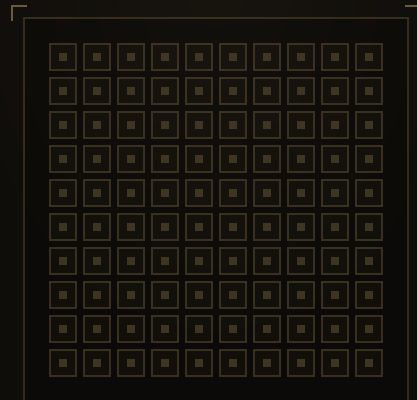

Direct allocation in Aurum Fund deal flow. Curated pre-IPO equity and US private credit that Korean structures cannot reach directly. A kilogram of physical gold in your name, working as collateral while it appreciates. One Singapore subscription replacing the FSCMA, FETA, KoFIU, and NTS paperwork that compounds across every direct deal. *Quarterly reporting and full portal access are standard.*

III

One kilogram, *two jobs*.

*How gold does two things at once. The Korean-specific gap.
Why this structure exists only here.*

One kilogram. *Two jobs.*

A single kilogram, at rest in a Singapore Freeport vault, simultaneously does *two jobs* — it protects the member, and it funds the institutional deal pipeline through a tiered credit line (up to 75% LTV at Aurum's discretion, sized to member commitment level). *No bank, no family office, no product in Asia combines the two.* Aurum provides that form.

JOB ONE

The bar *protects.*

Protection · unmoved · unseized

Allocated and segregated at Singapore Freeport. Serial-identified. London-market insured. The member's name on the certificate. *LTV monitoring with member alerts at 70% — 10 percentage points before the bank's margin threshold.* The metal is still, and it is safe.

JOB TWO

The credit *earns.*

Production · deployed · productive

A credit line from a Singapore institutional bank, collateralized by the bar — up to 75% LTV at Aurum's discretion, sized to member commitment level. Proceeds deploy into pre-IPO equity and US private credit. *~15% base IRR target, net of fees.*

 20% FUND RESERVE · CAPITAL CALL MECHANISM · LBMA SPOT AT EXECUTION

Two engines. *One NAV.*

The kilogram becomes *two compounding instruments at once*. The metal appreciates on its own arc.

The credit it generates compounds on the pipeline's. The member's NAV is the sum.

GOLD HELD <i>1 kg+</i> <i>LBMA-grade · allocated · in member's name</i>	CREDIT DRAWN <i>up to 75%</i> <i>LTV by member commitment level</i>	WORKING CAPITAL <i>gold + drawn</i> <i>bar value + credit, deployed into the book</i>
--	--	--

ENGINE I · GOLD FLOOR

Compounds at the rate of *money supply*.

The kilogram appreciates passively against won, dollar, yen — the asymmetry that makes Korean families hold it in the first place. Aurum doesn't accelerate it. It simply stops the metal from sitting idle.

ENGINE II · THE PIPELINE

Compounds at the rate of *the deal book*.

The credit drawn against the bar deploys into pre-IPO equity at 18–25% and private credit at 10–14% gross. The bar grows the floor; the deals grow the ceiling.

The metal sits still. The capital works. The NAV is the sum.

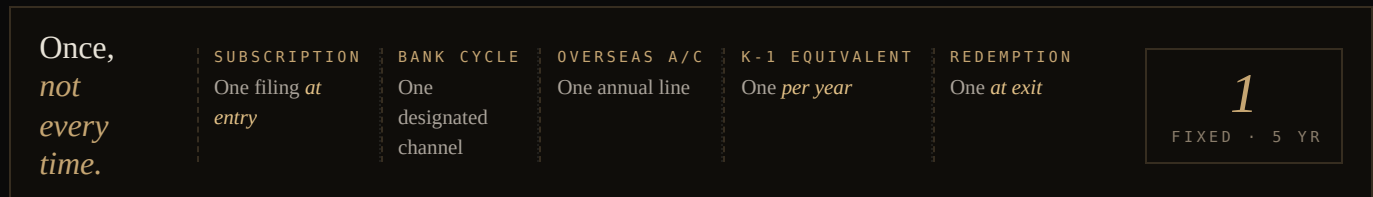

IV

The *Simplification.*

*One filing. One pool. One redemption. The paperwork a member does **once** — not every time.*

Four walls. *One subscription.*

A Korean member's capital, deployed directly, hits four regulatory walls. Each wall generates filings that compound every deal, every year. *One Singapore subscription replaces all of it.*

1 FUND FILING · KOREAN LP-LEVEL OBLIGATIONS UNCHANGED

Korean LP-level obligations remain — annual NTS overseas account reporting, capital gains on distributions, designated FX bank relationship. Aurum provides standardised K-1-equivalent documentation, source-of-funds support, and annual position summaries to support member's Korean tax counsel. **What Aurum eliminates is the per-deal filing burden, not the member's resident obligations.** Members are advised to engage qualified Korean tax / FX counsel prior to subscription.

V

The *Platform.*

Where new deals reach you first.

The *pipeline*, gated.

In the quarters following first close, sourced positions rotate through the platform — member-gated, sequenced within the founding group. *A private channel, not a marketplace.*

WHAT IT IS

The single channel through which Aurum shares *sourced deal flow* with the founding group.

WHY IT EXISTS

Deal access in Asia is a *relationship problem*, not a pricing problem. The platform is the relationship.

WHAT YOU GET

First look on Aurum-sourced fund deals. Allotment priority by member commitment. Optional step-up at partner discretion.

VI

Featured *deals.*

*Two exceptional positions Aurum is sourcing to seed the fund.
The opening book.*

Two deals. *One opening book.*

Aurum has sourced two positions of the kind that rarely clear an open market — one in frontier AI, one in defense autonomy. The fund forms around them. Participating members receive *pro-rata allocation in both* at first close.

DEAL № 01 · FRONTIER AI		LATE-STAGE SECONDARY	
 Anthropic ANTHROPIC PBC	Defining the <i>foundation-model</i> category. Builder of <i>Claude</i>. Enterprise revenue trajectory unmatched in software history — a genuinely rare secondary opportunity at current valuation. ----- Aurum routes through a direct-LP co-investor relationship. Primary market is closed; secondary allocations are scarce and highly curated.	AURUM ALLOCATION \$10M TARGET · AT CLOSE	
DEAL № 02 · DEFENSE AUTONOMY		PRE-IPO	
 SHIELD SHIELD AI INC	AI-piloted systems for <i>allied defense</i>. Pre-IPO defense autonomy — US and NATO-aligned contracts in hand. Dual-use sector with structural tailwinds and a clear <i>twenty-four-month path</i> to liquidity. ----- Aurum routes through a late-stage crossover round. Strategic ticket available because of a strategic LP's partial reallocation — closes quickly.	AURUM ALLOCATION \$10M TARGET · AT CLOSE	
OPENING BOOK \$20M two deals · closed together	PER DEAL \$10M Aurum Funds allocation	CLOSE TIMING Q3 '26 subject to deal timing	MINIMUM 1 kg at first close

Sourced positions as of MMXXVI Q1 · subject to availability, allocation, and final terms at close.

QUIETLY · FOREVER

For the *founding group*.

The opening book closes this quarter. *A counted set of seats.* Held until close.
